

Run-to-Run Dispersion in Threshold-Independent FedAdam Test Performance

Metric	Mean SD across points	SD range	Mean CV (%)	Min. CV (%)	Client at min. CV	Max. CV (%)	Client at max. CV	Max. relative single-run dev. (%)	Client at max. relative deviation
ROC-AUC	0.0007	0.0003–0.0014	0.08	0.03	8,192	0.17	16,384	0.31	16,384
AP	0.0025	0.0002–0.0046	0.60	0.05	2	1.10	32	1.80	16,384
Weighted loss	0.0014	0.0004–0.0075	0.27	0.08	4	1.32	32,768	1.96	32,768

Note. Statistics are based on five repeated runs at each of 15 scaling points. Mean SD is the arithmetic mean of the point-specific sample standard deviations. CV denotes the point-specific coefficient of variation.
